

All substitutionary parts for BUGLO's products are available at producer's during whole use period (working life) of the product.

Necessary toolset for the assembly of the products:

- Mallet rubber (rubber hammer)
- Tools used to making holes in the ground/surface
- Box wrench nr 19
- Level

During the assembly pay attention to: vertical columns setting, tightening all screws, securing and marking mounting location. Before putting device into use it's required to check the stability of all elements, remove protecting tapes and check level and the condition of the amortization surface.

Product installation, conservation and replacement of elements pose a threat for playing children, which is why it is required to mark and secure the assembly space. Such security must guarantee no access to the work space both during and after work. Main threats can be caused by electrical devices and tools, deep foundation holes and incomplete product sets. During the installation it's required to ensure the assembly space to be about the same size as the safety zone of the equipment. You must pay attention to the direction of the location of the slide made of stainless steel. The steel part of the slide cannot be directed to the south because it may get heat (very hot).

Caution:

During assembly pay special attention to :

- 1) Proper horizontal roundabout roller setting.
- 2) Tightening all screws and mountings.
- 3) Marking and securing assembly place.

Before handling this device to use you must check stability of all of the parts, remove securing tapes, check level and condition of fall amortization surface.
